Authorization for this examiner's amendment was given in a telephone interview with Andrew Tiajolloff on 12/10/2009.

The application has been amended as follows:

6. A method for producing a quartz glass article, for producing an optical component, the method comprising the steps of:

providing a quartz glass cylinder having an inner bore therein,

mechanically treating the inner bore to a final dimension; and then

applying an etching treatment to the inner bore,

wherein the step of mechanically treating the inner bore comprises a plurality of removal processes each with a successively smaller removal depth such that,

the inner bore has **closed** subsurface cracks therein, and all of the **closed** subsurface cracks in the inner bore have depths of not more than 2 mm after the last removal process, and

wherein the inner bore is subsequently subjected to the etching treatment so as to produce an etching removal with a depth of not more than 50 μm , and such that the

inner bore has an etched structure that has cracks therein, all of said cracks having a depth of not more than 2.0mm and a width of not more than 100 μm .

2. The following is an examiner's statement of reasons for allowance: The prior art of record, such as Takagi, discusses the treatment of open sub-surface cracks, and is silent as to the depth of any closed subsurface cracks that are present after mechanical treatment.
